

Extraction of V_{us} from Kaon Decays

Leandar Litov
University of Sofia

Determination of V_{us}

$|V_{us}|$ can be extracted from $K \rightarrow \pi l \nu$ via

$$|V_{us}| \cdot f_+^{K\pi}(0) = \sqrt{\frac{128 \pi^3 \Gamma(Kl3(\gamma))}{C^2 G_F^2 M_K^5 S_{EW} I_K}}$$

Where:

$S_{EW} = 1.0232$ – short distance enhancement factor,

$$I_K(f_{+,0}^{K\pi}(t)) \text{ - phase space integral, } C = \begin{cases} 1 & K_{e3}^0 \\ 1/\sqrt{2} & K_{e3}^+ \end{cases}$$

Long distance radiative corrections are included in I_K and $f_+(0)$

The physical quantity

$$\Gamma(K_{e3(\gamma)}) = \Gamma(K_{e3}) + \Gamma(K_{e3}\gamma) + \dots$$

where the radiative corrections with virtual and real photons are taken into account **is well defined, calculable and measurable!**

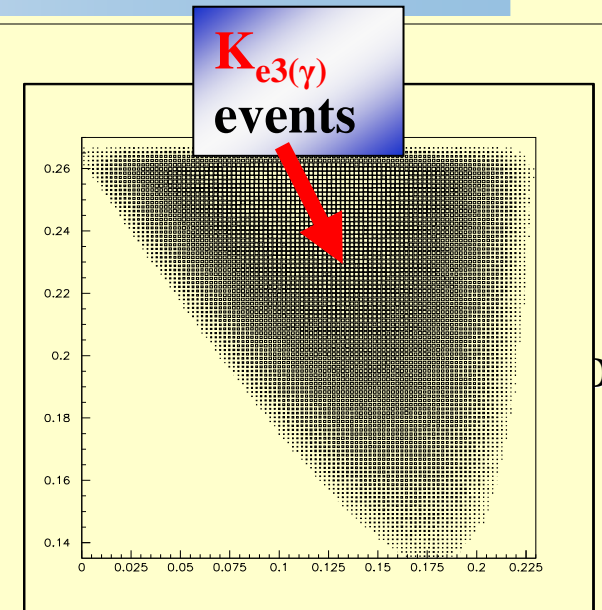

Determination of V_{us}

Prescription

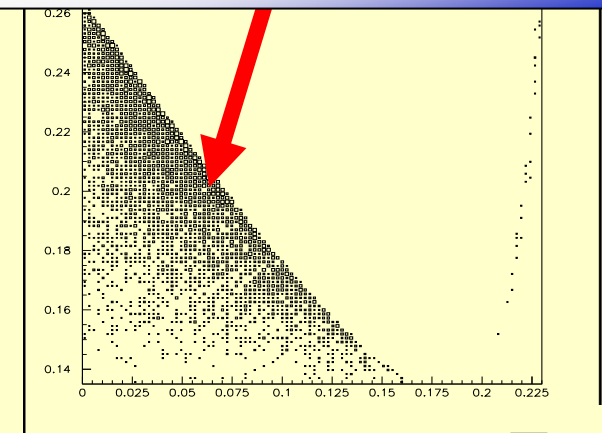

- Accept all photon energies
- Accept all angles between pion and positron
- Accept only pion and positron energies within the original 3-body Dalitz plot.
- Inclusive rate obtained by integrating over the original domain

Experimentally – inclusive measurement of $\text{Br}(\text{Ke3})$. For determination of V_{us} , the corresponding $\text{Br}(\text{Ke3})$ should be inside the Dalitz plot. Corrections are:

$C_K=0.49\%$ for K^0 and $C_K=0.50\%$ for K^+

$K_{e3\gamma}$ events (excluded for the V_{us} extraction)

Determination of V_{us}

We can use three different parameterizations of the formfactors

Linear

$$f_{+,0}^{(o)}(t) = f_+^{(o)}(0) \left[1 + \lambda_{+,0} \frac{t}{m_{\pi^\pm}^2} \right]$$

Quadratic

$$f_{+,0}^{(o)}(t) = f_+^{(o)}(0) \left[1 + \lambda_{+,0} \frac{t}{m_{\pi^\pm}^2} + \lambda'_{+,0} \frac{t^2}{m_{\pi^\pm}^4} \right]$$

Pole

$$f_{+,0}^{(o)}(t) = f_+^{(o)}(0) \frac{m_{+,0}^2}{m_{+,0}^2 - t}$$

Determination of V_{us}

Input for calculation of V_{us}

Experimental data

- ✓ $\text{Br}(\text{Ke3})$
- ✓ Mean life times of K^0_L , K^0_S , K^+
- ✓ Linear and quadratic slopes of $f_+(t) - \lambda_+$, λ_0 and λ_+ , λ_+' , λ_0
- Theoretical input – $f_+^{K\pi}(0)$

Determination of V_{us}

Experimental data

To have comparable results

Experimental data should be treated in the same way

- Inclusive measurement of the $\text{Br}(\text{Ke3})$
- Correct account for radiative corrections, including real photons

Two classes of data on measurement of $\text{Br}(\text{Ke3})$

Old data – actually what is included in PDG 2004

New data – published or reported in 2003, 2004 and 2005

Determination of V_{us}

Experimental data

The careful investigation of old experimental data on measurement of $\text{Br}(\text{Ke}3)$ leads to the definite conclusion that due to different reasons they are not enough accurate and are not suitable for extraction of V_{us} matrix element

In what follows we will use only the new high statistics experimental data on measurement of $\text{Br}(\text{Ke}3)$

$K^0_L \rightarrow \pi e \nu$ – NA48 result

Experimental result

$$\text{Br}(K^0_L \text{ e3})/\text{Br}(2\text{tr}) = 0.4978 \pm 0.0035$$

To determine $\text{Br}(K^0_L \rightarrow \pi e \nu)$ we need $\text{Br}(K^0_L \rightarrow 3\pi^0)$

PDG04: $\text{Br}(K^0_L \rightarrow 3\pi^0) = 0.2105 \pm 0.0028$

KTeV $\text{Br}(K^0_L \rightarrow 3\pi^0) = 0.1945 \pm 0.0018$

Average according PDG prescription

$$\text{Br}(K^0_L \rightarrow 3\pi^0) = 0.1992 \pm 0.0070$$

$$\text{Br}(K^0_L \text{ e3}) = 0.4010 \pm 0.0028_{\text{exp}} \pm 0.0035_{\text{norm}}$$

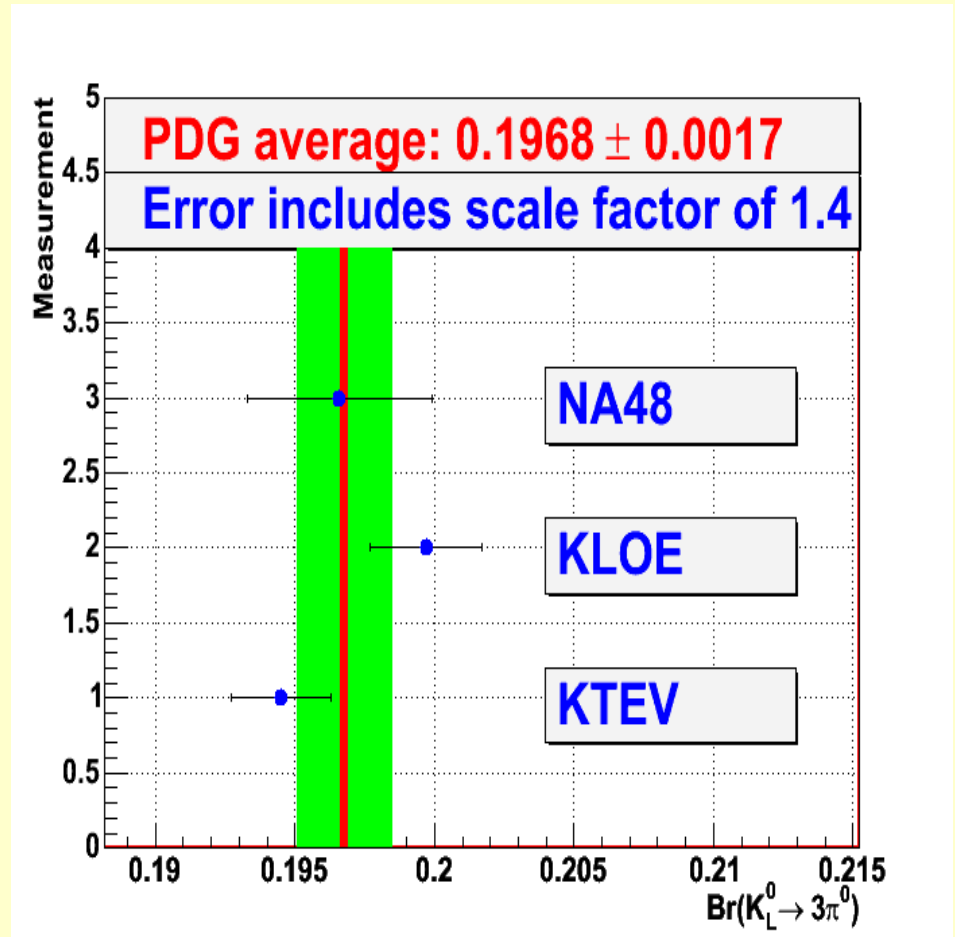

Results for $\text{Br}(K_L^0 \rightarrow 3\pi^0)$

Taking into account the KTeV,
NA48 and KLOE results we obtain

$$\text{Br}(K_L \rightarrow \pi^0\pi^0\pi^0) = 0.1968 \pm 0.0017$$

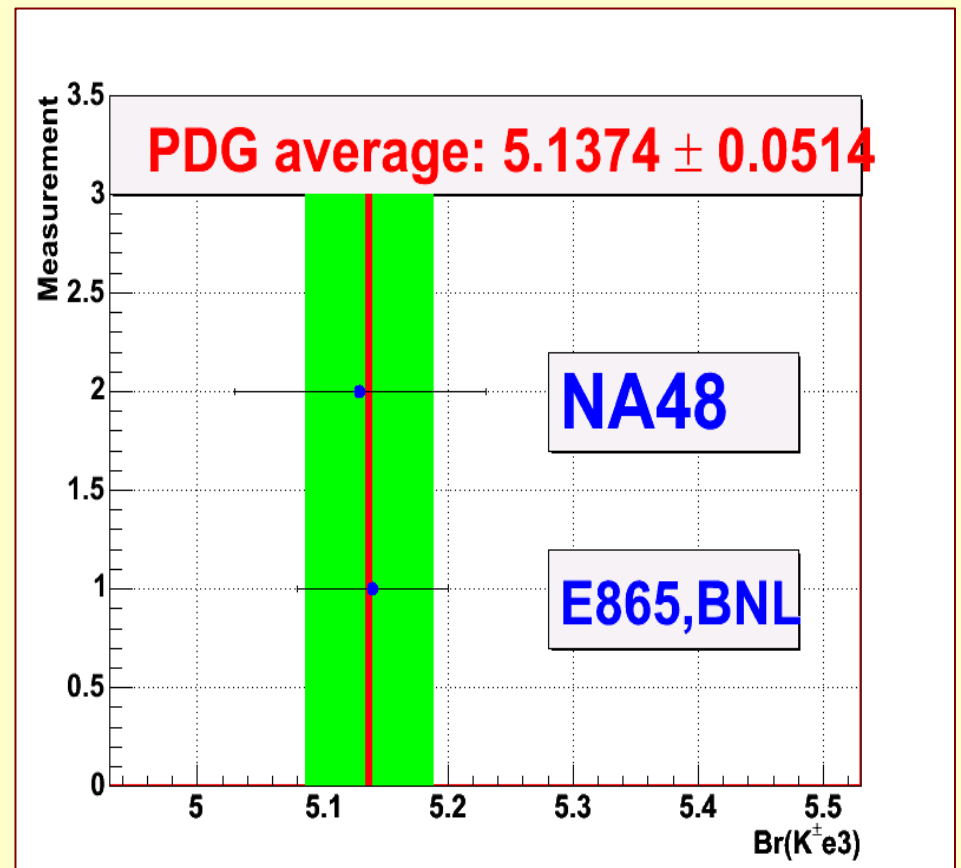

Then the NA48 result changes to

$$\text{Br}(K_L^0 \rightarrow e^+e^-) = 0.4022 \pm 0.0029$$

Determination of V_{us}

Br(Ke3)

$$\text{Br}(K_L^0 e3) = 0.4044 \pm 0.0020$$

$$\text{Br}(K^\pm e3) = (5.137 \pm 0.051)\%$$

Determination of V_{us}

Slope of the $f_+(t) - K_L^0 e^3$

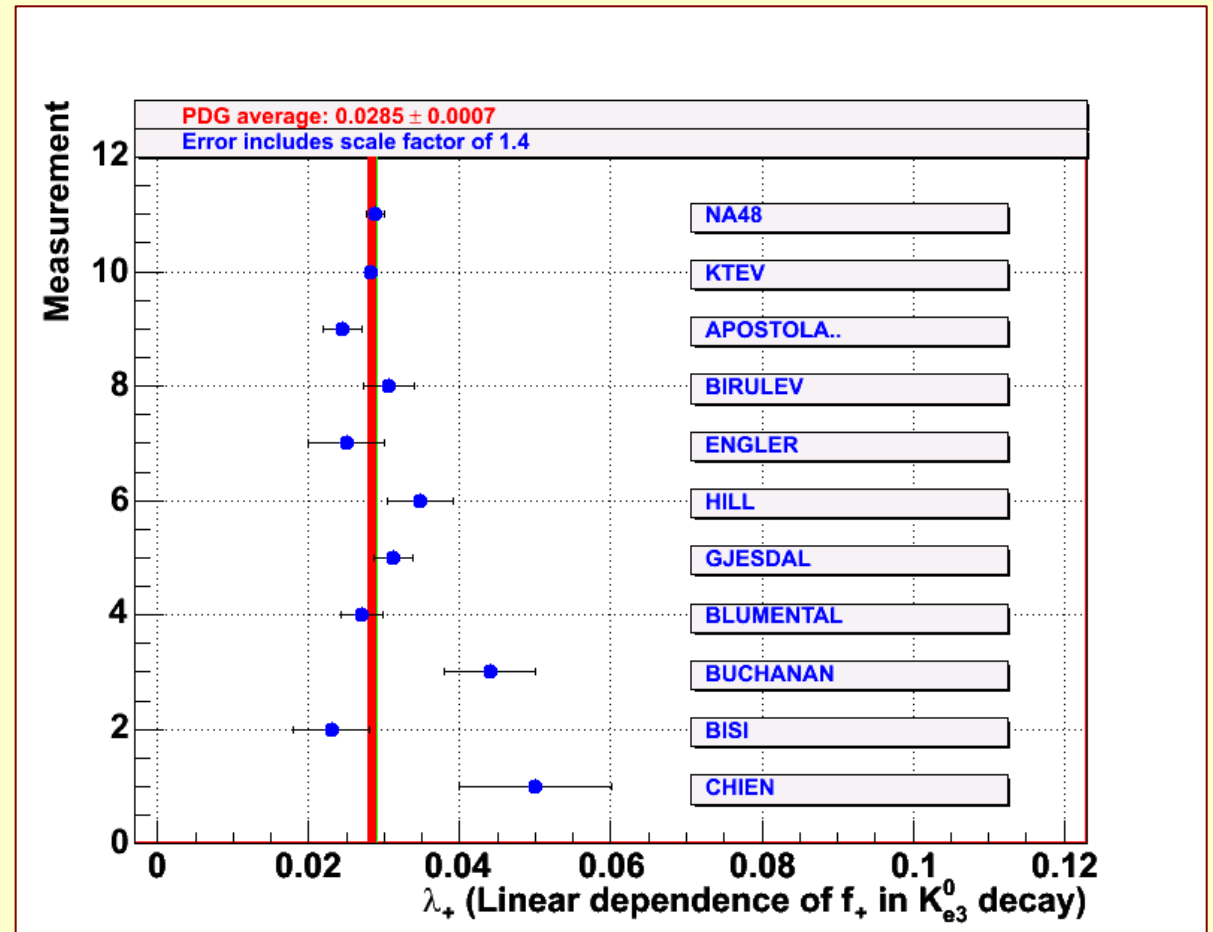

Linear approximation

$$\lambda_+ = 0.0285 \pm 0.0007$$

Quadratic approximation
KTeV result

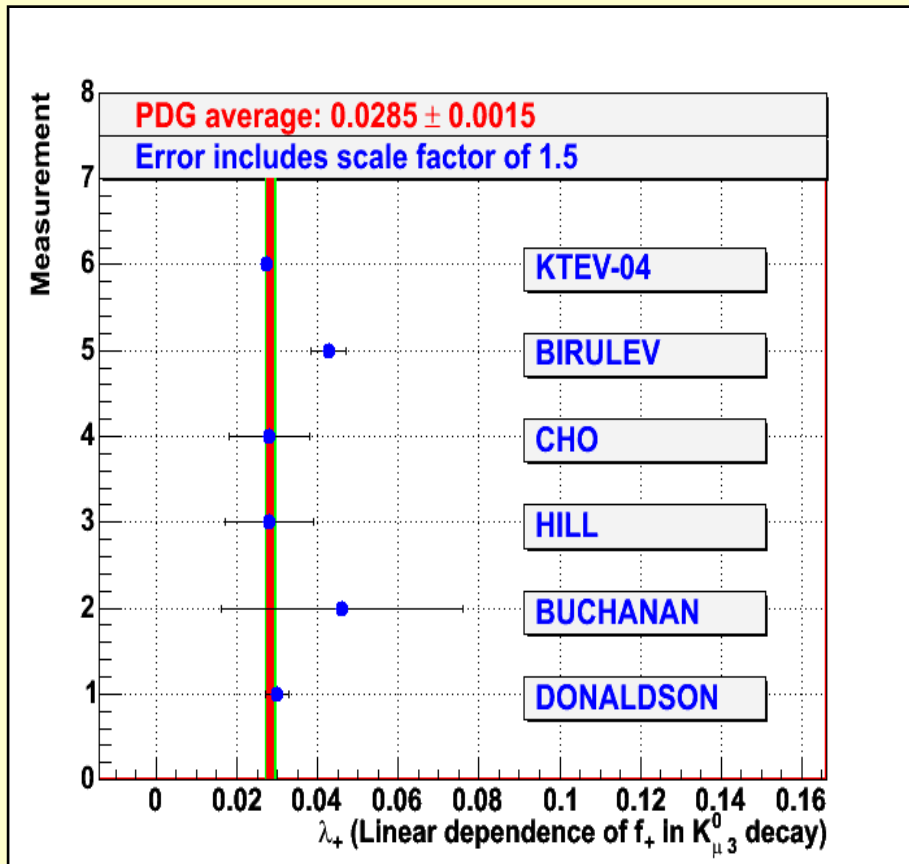

$$\lambda_+ = 0.02167 \pm 0.00199$$

$$\lambda_+' = 0.00144 \pm 0.00039$$

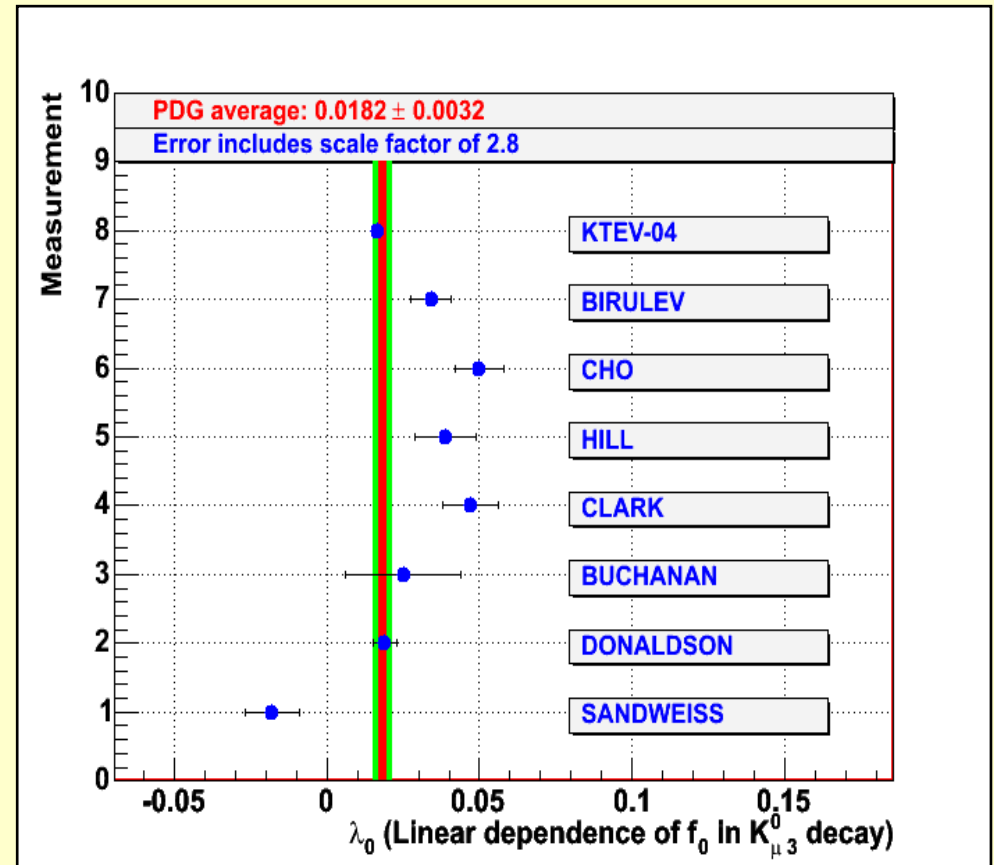

Determination of V_{us}

Slope of the $f_+(t) - K^0_{\mu 3}$

$$\lambda_+ = 0.0285 \pm 0.0015$$

$$\lambda_0 = 0.0182 \pm 0.0032$$

Determination of V_{us}

Slope of the $f_+(t) - K^\pm$

Linear approximation

$$\lambda_+ = 0.0277 \pm 0.0005$$

Quadratic approximation
ISTRA+ result

$$\lambda_+ = 0.02324 \pm 0.00155$$

$$\lambda_+' = 0.00084 \pm 0.00041$$

Extraction of V_{us} from Kaon decays

KAON2005, Chicago, June 2005

Determination of V_{us}

Mean life time

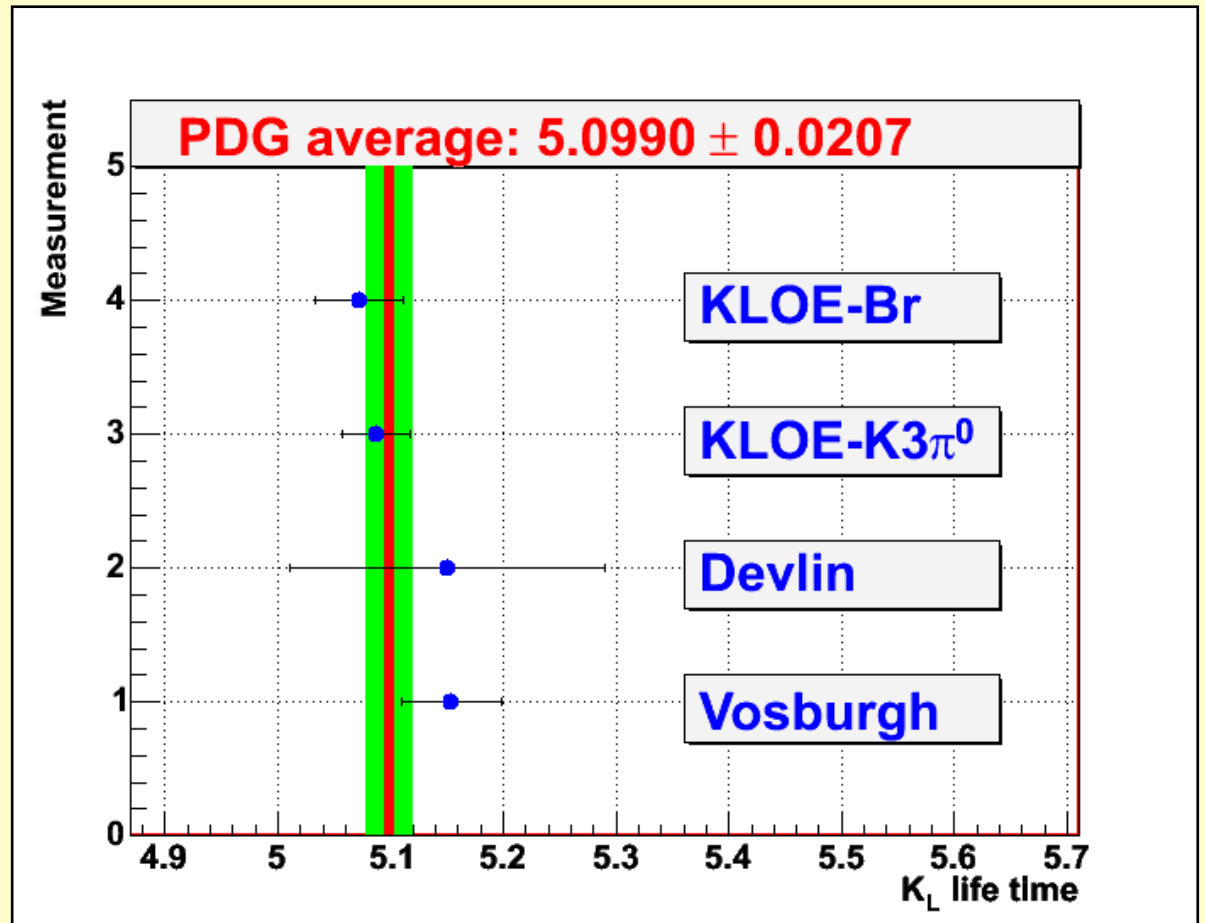

K_L^0

New KLOE results

$$\tau = (5.099 \pm 0.021) \cdot 10^{-8} \text{s}$$

K^\pm

$$\tau = (1.2385 \pm 0.0025) \cdot 10^{-8} \text{s}$$

Determination of V_{us}

Calculation of $f_+^{K\pi}(0)$

Let us represent $f_+(t)$ in the following form:

$$f_+ = \tilde{f}_+(t) + \hat{f}_+(t)$$

$$\tilde{f}_+(p^4)$$

$$\tilde{f}_+(p^6)$$

QCD effects to $O(p^6)$
EM contribution to $O(e^2p^2)$
EM contraterms relevant to $\pi^0 - \eta$ mixing

local effects of virtual photon
exchange of order $O(e^2p^2)$

Determination of V_{us}

Calculation of $f_+^{K\pi}(0)$

Calculation of $f_+(0)$ to $O(p^4)$ - Gasser & Leutwyler
First calculation to $O(p^6)$ – Leutwyler & Roos
QCD + isospin breaking

$$\stackrel{\sim K^0\pi^-}{f_+}(0) = 0.961 \pm 0.008$$

$$\stackrel{\sim K^+\pi^0}{f_+}(0) = 0.982 \pm 0.008$$

$$\stackrel{\sim K\pi}{f_+}(0)|_{p^6} = -0.016 \pm 0.008$$

Bijnens & Talavera

$$\stackrel{\sim K\pi}{f_+}(0) = 0.976 \pm 0.010$$

$$\stackrel{\sim K\pi}{f_+}(0)|_{p^6} = -8 \left(\frac{M_K^2 - M_\pi^2}{F_\pi^2} \right) [C_{12}^r(\mu) + C_{34}^r(\mu)] + \Delta_{loops}(\mu)$$

$$\stackrel{\sim K\pi}{f_+}(0)|_{p^6}^{local} = -0.016 \pm 0.008$$

$$\Delta_{loops}(M_\rho) = 0.0146 \pm 0.0064$$

Determination of V_{us}

Calculation of $f_+^{K\pi}(0)$

Quenched lattice calculations – Becirevic et al.

$$\tilde{f}_+^{K^0\pi^-}(0) = 0.960 \pm 0.009$$

$$\tilde{f}_+^{K\pi}(0)|_{p^6} = -0.017 \pm 0.008$$

Cirigliano, Neufeld and Pichl

Calculation using χ PT with virtual photons and leptons

- Isospin breaking by the quark masses up to $O((m_u - m_d)p^2)$
- Isospin conserving contribution from SU(3) breaking $O(p^6)$
- Electromagnetic effects up to $O(e^2 p^2)$

Determination of V_{us}

Calculation of $f_+^{K\pi}(0)$

To extract V_{us} we have used the following values

	LO + NLO QCD	EM. radiative corrections	NNLO QCD	total
K^0	0.97699 ± 0.00002	0.0046 ± 0.0008	-0.001 ± 0.010	0.981 ± 0.010
K^+	1.0002 ± 0.0022	0.0032 ± 0.0016	-0.001 ± 0.010 0.007 ± 0.012	1.002 ± 0.010
K^0	0.97699 ± 0.00002	0.0046 ± 0.0008	-0.017 ± 0.009	0.965 ± 0.009
K^+	1.0002 ± 0.0022	0.0032 ± 0.0016	-0.017 ± 0.009	0.986 ± 0.010

The main uncertainty ($\sim 1\%$) comes from $O(p^6)$ contribution

Determination of V_{us}

Results – K^0

$$f_+^{K^0\pi^+}(0) = 0.965 \pm 0.009$$

Linear approximation of $f_+(0)$

Experiment	Br	$V_{us}f_+(0)$	V_{us}
PDG	0.3881 ± 0.0027	0.2125 ± 0.0009	0.2202 ± 0.0022
NA48	0.4022 ± 0.0029	0.2163 ± 0.0009	0.2241 ± 0.0022
KTeV	0.4067 ± 0.0011	0.2175 ± 0.0006	0.2254 ± 0.0021
KLOE – K_L	0.4007 ± 0.0015	0.2159 ± 0.0006	0.2237 ± 0.0021
KLOE – K_S	$(7.09 \pm 0.11) \cdot 10^{-4}$	0.2165 ± 0.0017	0.2244 ± 0.0021
KTeV – $K_{\mu 3}$	0.2701 ± 0.0009	0.2177 ± 0.0007	0.2256 ± 0.0021
KLOE – $K_{\mu 3}$	0.2698 ± 0.0015	0.2176 ± 0.0009	0.2255 ± 0.0021
Average K_L	0.4044 ± 0.0020	0.2169 ± 0.0007	0.2248 ± 0.0024

Determination of V_{us}

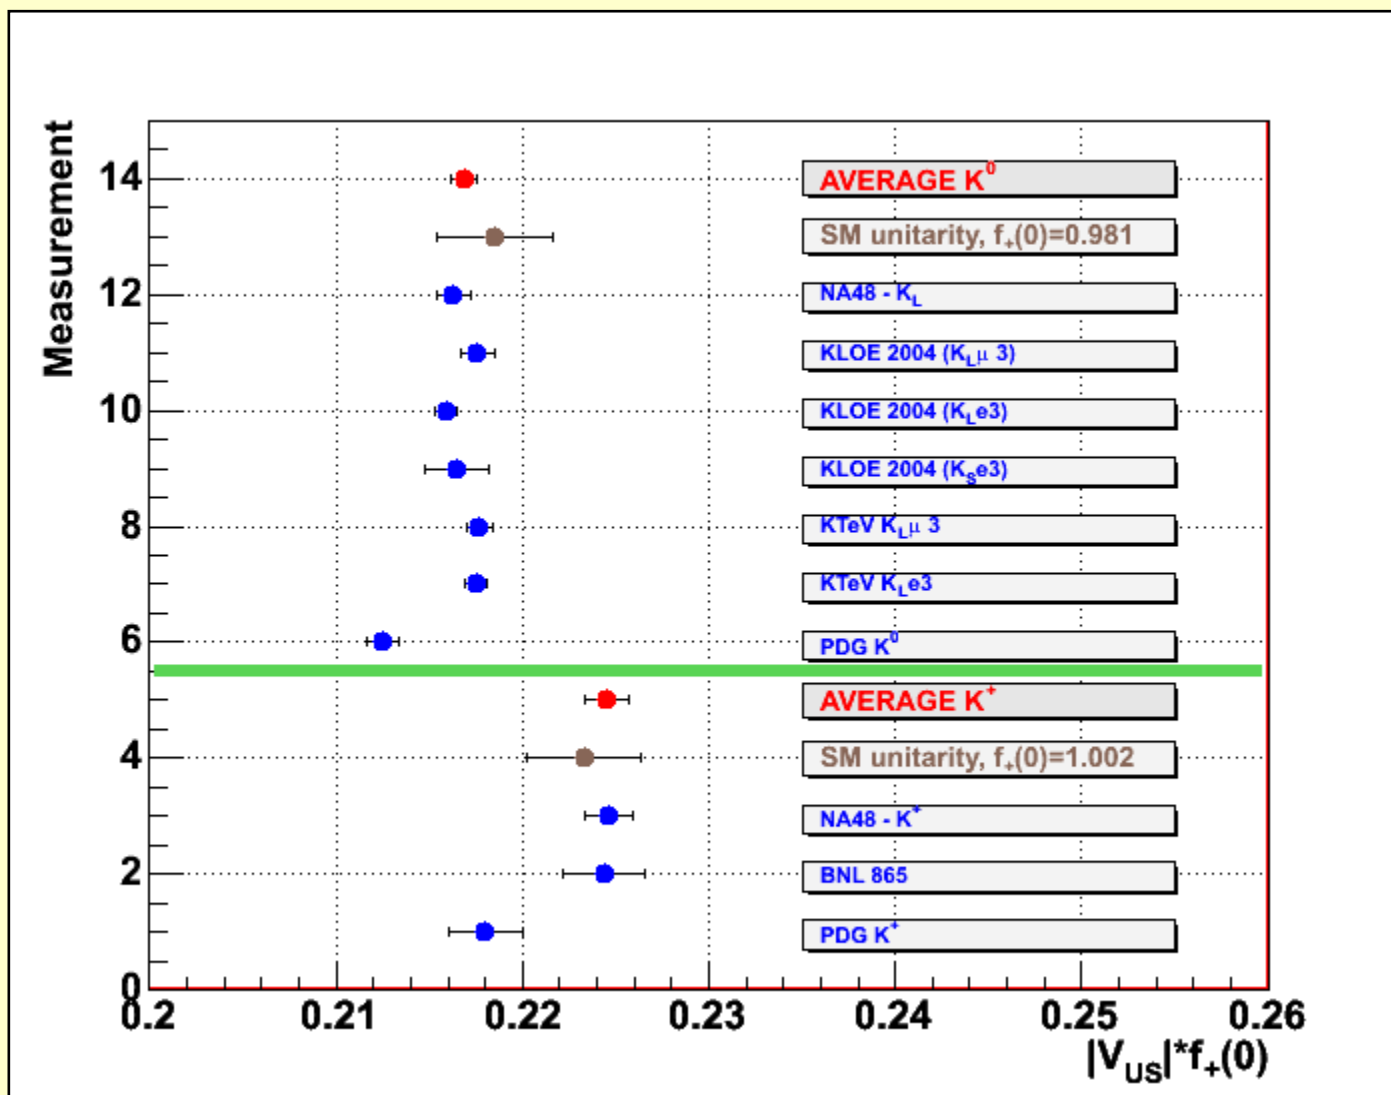

Results – K^+

Linear approximation of $f_+(0)$

$$f_+^{K^+\pi^0}(0) = 0.986 \pm 0.010$$

Experiment	Br [%]	$V_{us} f_+(0)$	V_{us}
PDG	4.84 ± 0.09	0.2180 ± 0.0020	0.2176 ± 0.0030
NA48	5.14 ± 0.06	0.2246 ± 0.0013	0.2278 ± 0.0026
E865	5.13 ± 0.10	0.2244 ± 0.0022	0.2276 ± 0.0031
Average	5.137 ± 0.051	0.2245 ± 0.0012	0.2277 ± 0.0025

Determination of V_{us}

Consistency of K_L and K_{ch} data

Ratio of $f_+(0)$ for K_L and K^+ can be measured

$$R = f_+^{K^0\pi^+}(0) / f_+^{K^+\pi^0}(0)$$

Its calculation is free from many of the theoretical uncertainties

$$R^{th} = 1.022 \pm 0.003 - 16\pi\alpha X_1$$

$$1.017 \leq R^{th} \leq 1.027$$

From the averaged K_L and K^+ data we obtain

$$R^{exp} = 1.035 \pm 0.006$$

- In disagreement with theoretical predictions $\sim 2\sigma$**
- failure of the naïve dimensional analysis for X_1
 - failure of chiral power counting
 - wrong mean life times

Determination of V_{us}

If we use for V_{us} determination

$$f_+^{K^0\pi^+}(0) = 0.981 \pm 0.010$$

$$f_+^{K^+\pi^0}(0) = 1.002 \pm 0.010$$

$$|V_{us}|^{K^0\pi^+} = 0.2211 \pm 0.0022$$

$$|V_{us}|^{K^\pm\pi^0} = 0.2241 \pm 0.0025$$

The values of V_{us} are changed $\sim 1.7\sigma$
Calculation of $f_+(0)$ is the most important problem to be solved

Determination of V_{us}

Determination of V_{us}

Non linear approximation leads to

$$|V_{us}| \cdot f_+^{K^0\pi^+}(0) = 0.2179 \pm 0.0011$$

$$|V_{us}| \cdot f_+^{K^\pm\pi^0}(0) = 0.2253 \pm 0.0014$$

$$|V_{us}| \cdot f_+^{K^0\pi^+}(0) = 0.2258 \pm 0.0024$$

$$|V_{us}| \cdot f_+^{K^\pm\pi^0}(0) = 0.2285 \pm 0.0027$$

**The values of $V_{us}f_+(0)$ are changed $\sim 1\sigma$ and $\sim 0.6\sigma$
The values of V_{us} are changed $\sim 0.4\sigma$ and $\sim 0.3\sigma$**

In perfect agreement with unitarity of CKM matrix

Determination of $f_+(0)$

If we suppose that CKM matrix is unitary

$$|V_{us}| = 0.2265 \pm 0.0022$$

then we can determine the values of $f_+(0)$ using

$$|V_{us}| \cdot f_+^{K^0\pi^+}(0) = 0.2169 \pm 0.0007$$

$$|V_{us}| \cdot f_+^{K^\pm\pi^0}(0) = 0.2245 \pm 0.0012$$

$$f_+^{K^0\pi^+}(0) = 0.958 \pm 0.009$$

$$f_+^{K^\pm\pi^0}(0) = 0.991 \pm 0.010$$

The non linear approximation does not effects the result significantly

$$f_+^{K^0\pi^+}(0) = 0.962 \pm 0.008$$

$$f_+^{K^\pm\pi^0}(0) = 0.995 \pm 0.011$$

Conclusions- V_{us}

- ❖ The careful analysis of the existing data has shown
 - the old measurements are not suitable for determination of V_{us}
 - new measurement of all kaon branching fractions is desirable
 - new more precise measurements of $Ke3$ and $K\mu3$ form factors are needed
 - new measurement of the kaon mean life times will be welcome
 - KLOE and part of NA48 data are still preliminary
- ❖ V_{us} values obtained using average values of $Br(Ke3)$
 - Support the unitarity of CKM matrix
 - Strongly depend from the values of $f_+(0)$
 - More precise calculation of $O(p^6)$ contribution is required
- ❖ The experimental data for R are in disagreement with theoretical predictions
- ❖ Measured values of $f_+(0)$ (with unitary CKM matrix) cause questions to the theory

Determination of V_{us}

Old experimental data - K^\pm

Direct measurement of $Br(K_{e3})$

- dominating experiment Chiang et al., Phys.Rev.D6, 1972, p.1254 accuracy $\sim 2\%$
Ke3 measurement is not inclusive
No radiative corrections
The decays $\pi \rightarrow \mu$ are not taken into account
The Dalitz decays of π^0 are not taken into account

In the PDG fit also contribute

- $Br(K_{e3})/Br(2\pi)$
-in the dominating experiment ($\sim 5\%$ acc.) rad. corrections without real γ
- $Br(K_{\mu 3})/Br(K_{e3})$
K. Horie, Phys. Lett. B513, p. 311, 2001
The measurement is not inclusive
Ke3 γ is considered as background

Determination of V_{us}

Old experimental data – K_L^0

**There is no direct measurement of $\text{Br}(K_{e3})$
In the PDG fit contribute**

- $\text{Br}(K_{\mu 3})/\text{Br}(K_{e3})$ – 4 experiments with good statistic
 - Two of them are perfect, both measure $\text{Br}(K_{\mu 3})/\text{Br}(K_{e3}) = 0.662$ close to KTeV result
 - The other two – Hydrogen bubble chambers
 - In this case separation of K_{e3} and $K_{\mu 3}$ decays is extremely difficult
 - 50% of the events are ambiguous – to separate complicated weighting procedure
 - Their results shift $\text{Br}(K_{\mu 3})/\text{Br}(K_{e3})$ to 0.697
 - in strong disagreement with recent measurements
- The other contribution is from Kreutz, ZPHY C55, p.67, 1995 – the results from this experiment are in strong contradictions with recent measurements
